

HOW CAN I HELP?

Your generous donation helps us to provide pathogen-free drinking water projects to vulnerable communities. We are grateful for each donation and each new member.

If you have a project where clean drinking water is not available, please contact us.

ANNUAL MEMBERSHIP

Single membership	CHF 50
Family membership	CHF 100
Institutional membership	CHF 300

aqua pura

**We help where
clean water is not
available**

aqua pura

**Swiss Non-Profit Organization for clean
pathogen-free water**

**All people should have access to clean
water - but the reality is different.**

Our "Waterflow-Systems" transform contaminated water from creeks, lakes and rain-water tanks into pathogen-free, clean drinking water, economically and sustainably.

The systems are robust, and designed to perform reliably under harsh conditions.

OUR GOAL

To provide pathogen-free drinking water for everyone to prevent lethal diseases.

Globally, four out of ten people do not have access to clean water. Every day – according to the United Nations – thousands of people die due to contaminated drinking water.

In many cases, rivers, ponds and rain collecting points serve as water sources for hospitals, schools and villages. These water sources, as well as the groundwater, are often contaminated by bacteria and viruses.

EFFECTIVE AND SUSTAINABLE

Our water purification system “Waterflow” can produce between 250 L/h and 1000 L/h of pathogen-free drinking water. Our focus is to support small communities such as villages, hospitals, schools and orphanages which cannot count on large networks and do not have access to big international aid organizations or governmental support.

CLEAN WATER FOR EVERYONE

We make sure that the water provided by our projects is not commercialized and that all people, regardless of faith or origin have free access to clean drinking water.

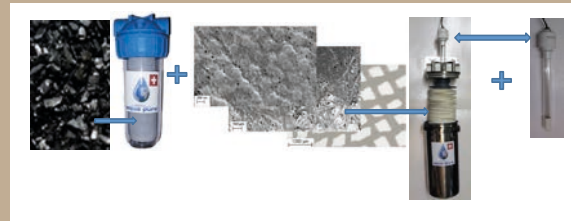

THE “WATERFLOW-SYSTEM”

Water purification in a 3-step process:

Step 1: Filtration of solids and adsorption of dissolved particles and odorants by an **activated carbon filter**

Step 2: Ultrafiltration of bacteria and nanoparticles by a **3-layered PVDF filter system**

Step 3: Inactivation of viruses by photochemical decomposition with UVC irradiation

THE BENEFITS

Pathogen-free water

- No boiling
- No use of chemicals
- Easy installation and maintenance
- Reliable and durable operation
- CO₂ neutral

ACHIEVEMENTS

Since the founding in 2007, aqua pura has provided more than 20,000 people with drinking water free of bacteria and viruses.

Together with our local partner organizations, we have completed many projects in various countries. We install 5 to 10 “Waterflow-Systems” in hospitals, schools and villages every year.

FINANCIAL TRANSPARENCY, NO ADMINISTRATIVE EXPENSES

We finance ourselves through membership fees, corporate and private donations and events. Donations and membership fees are tax deductible. The funds received are fully invested in the projects. All board members work voluntarily.
